InBody580

| High Accuracy	High Reproducibility	Wide Application
Accurate measurements derived from InBody Technology	Ergonomic Electrodes designed for ensured reproducibility	In-depth InBody Parameters for versatile applications

InBody Technology

InBody uses Bioelectrical Impedance Analysis (BIA) technology to measure human body composition. Impedance is the resistance of the human body generated when a micro alternating current flows through the human body. The human body is made of water that conducts electricity well, and the resistance varies depending on the amount of water. BIA is a technology that quantitatively measures body water through impedance that occurs when an electric current flows through the human body. InBody provides diverse information on body composition based on the measured body water.

Direct Segmental Measurement-BIA

The human body exhibits varying lengths and cross-sectional areas for each body segments. Arms and legs, characterized by narrow cross-sectional areas and length, exhibit higher impedance values and lower muscle mass. Conversely, the trunk, with its broader cross-sectional area, yields lower impedance values and higher muscle mass. Even the slightest change in trunk impedance can significantly influence the total muscle mass. Therefore, it is essential to separately measure trunk impedance for precise total muscle mass assessment. InBody conducts separate measurements for arms, legs, and the trunk, ensuring the utmost accuracy in the analysis.
8-Point Tactile Electrodes utilizing Thumb Electrodes

Using the structural features of the human body, InBody pioneered '8-Point Tactile electrode with Thumb Electrodes'. This ensures InBody measurements start at the same location on the wrists and ankles, guaranteeing reliable and reproducible results.
Simultaneous Multi-Frequency Impedance Measurement

InBody introduced a technology in body composition analyzers to trant multiple frequencies at once, obtaining specific impedance data for each for the first time. This reduces measurement time and error, leading to more accurate body water and fluid balance measurements.
No Estimations or Empirical Equations on Measured Values

InBody does not rely on empirical estimations based on age, gender, and more to ensure the accuracy of the measured data. In the past, empirical estimations were applied to the equations to ensure accuracy due to technological limitations. However, this resulted in lower accuracy when the measured population group changes. InBody overcame these limitations with technological developments such as direct segmental measurement-BIA to measure and analyze accurate body composition without applying empirical estimation. Therefore, InBody devices can provide data regardless of population and can reflect changes in the body with higher sensitivity.
Over 98% Correlation to DEXA on Accuracy

InBody precisely detects changes in body composition using impedance alone, showing a correlation over 0.98 with the gold-standard DEXA device.
Ryan T Hurt et al., The Comparison of SMF-BIA and DEXA for Estimating Fat Free Mass and Percentage Body Fat in an Ambulatory Population,
J Parenter Enteral Nutr. 2021 Aug;45(6):1231-1238

Enhanced User Experience

Quick Measurement

Experience quick and precise body composition assessment within just 30 seconds, available for immediate consultation.

Convenient Measurement

Obtain accurate measurements by holding anywhere on the ergonomically designed 3-way hand electrode.

User Friendly Interface

The InBody features a generous 10.1-inch touch display and keypad for a seamless and user-friendly operation.

Smart Recognition

QR code recognition with mobile phones simplifies member data entry for enhanced efficiency.

Comprehensive Parameters for Professionals

Segmental Body Water Balance

Imbalances in body water can signal various diseases. Therefore, maintaining a body water balance is crucial for health management. InBody provides the Body Water Balance (Whole & Segmental) for professional-grade screening and monitoring of the body water balance which is applicable for a detailed health assessment.

Segmental Cellular Integrity Check

Phase Angle is a vital measure that signifies cellular health by revealing Cellular Integrity and overall physiological function. InBody's Segmental Phase Angle serves as a precise tool for healthcare professionals to assess cellular health and guide necessary actions.

Sarcopenia Assessment

Sarcopenia can be easily assessed and evaluated using the Skeletal Muscle Mass Index (SMI) and Hand Grip Strength*, allowing for comprehensive evaluation and personalized consultations. *Hand Grip Strength is available with connection to the InBody Handgrip Dynamometer (InGrip).

InBody Result Sheet

Provides reference parameters to thoroughly evaluate patients' conditions across various medical practices.

Result Sheet Interpretation

1 Body Composition Analysis

Body weight is the sum of Total Body Water, Protein, Minerals, and Body Fat Mass. It is advisable to maintain a balanced body composition to stay healthy.

2 Muscle-Fat Analysis

The balance between Skeletal Muscle Mass and Body Fat Mass is a key health indicator. Muscle-Fat Analysis shows this balance by comparing the length of the bars for Weight, Skeletal Muscle Mass, and Body Fat Mass.

3 Obesity Analysis

For a more accurate evaluation of obesity, BMI alone is not sufficient. Opt for a more precise assessment using Percent Body Fat for clinical obesity analysis. The InBody can detect hidden health risks like Sarcopenic Obesity, in which a person appears slim on the outside but has a high percent body fat.

4 Segmental Lean Analysis

Analyzing the lean mass in each segment helps identify imbalances and insufficiently developed lean mass, which can be used to develop targeted exercise programs. The lean mass of the arms, trunk, and legs are represented by two bars. The top bar shows how much lean mass there is in a segment compared to the ideal weight, and the bottom bar shows how sufficient the lean mass is to support your current weight.

5 ECW Ratio-Phase Angle

The Extracellular Water Ratio shows the balance status of body water. The ratio between intra- and extracellular water remains consistent at about 3:2 ratio in healthy individuals, and when this balance is disrupted edema may occur. Phase Angle is a parameter that reflects the health status of the cell membrane. Strengthening of the cellular membrane and structural function will increase the Phase Angle. On the other hand, impairments to the cellular membrane can cause a decrease in the Phase Angle.

6 Body Composition History

Customize your user's journey by selecting from 19 parameters to track the Body Composition History, including Body Weight, Skeletal Muscle Mass, Body Fat Mass, Body Fat Percentage, and ECW Ratio. Assessing regularly on InBody to monitor progress is a great step toward a healthier life.

7 Logo Customization

The Customized Logo can be applied on the Result Sheet. URL can also be applied at the bottom of the Result Sheet as well.

8 InBody Score

The InBody Score is a unique index created by InBody to provide a snapshot of ones overall body composition health. The standard range is between 70-90 points, and points will be added or subtracted depending on the need of control of fat and muscle mass.

9 Visceral Fat Area

Visceral Fat Area is the estimated area of the fat surrounding internal organs in the abdomen. It is advisable to maintain a Visceral Fat Area under 100cm² to minimize the risk of diseases related to visceral fat.

10 Weight Control

Weight Control shows the recommended weight, fat, and muscle mass for a healthy body. A '+' signifies a need to gain, and a '-' indicates a need to lose weight. This metric is useful for setting personal health goals.

11 Body Balance Evaluation

Evaluate the balance of the body based on Segmental Lean Analysis.

12 Segmental Fat Analysis

Evaluate whether the amount of fat is adequately distributed in segments of the body. Each bar shows fat mass in comparison to the ideal amount.

13 Research Parameters

Various research parameters are provided such as Basal Metabolic Rate, Waist-Hip Ratio, Obesity Degree, Skeletal Muscle Mass Index (SMI), Body Cell Mass, and more.

14 Impedance

Impedance is the resistance that occurs when micro-alternating current is applied to the human body. InBody visualizes the impedance with the graph. You can easily detect if there is reversed impedance error by checking crossed lines in the impedance graph. Below the impedance graph, you can also check the error codes.

* Research Parameters can be customized in the settings.
Please refer to the Specifications page for available options.

InBody Result Sheet for Children

With the InBody Result Sheet for Children, you can assess and track a child's growth progress.

Specifications

InBody580 Body Composition Analyzer

Bioelectric Impedance Analysis (BIA) Measurement Item	Bioelectrical Impedance (Z)	20 Impedance Measurements by Using 4 Different Frequencies (5 kHz, 50 kHz, 250kHz, 500 kHz) at Each of 5 Segments (Right Arm, Left Arm, Trunk, Right Leg and Left Leg) 5 Phase Angle Measurements by Using 1 Frequencies (50kHz) at Each of 5 Segments (Right Arm, Left Arm, Trunk, Right Leg and Left Leg)
Electrode Method	Tetrapolar 8-Point Tactile Electrodes	
Measurement Method	Direct Segmental Multi-Frequency Bioelectrical Impedance Analysis (DSM-BIA) Simultaneous Multi-Frequency Bioelectrical Impedance Analysis (SMF-BIA)	
Body Composition Calculation Method	No Empirical Estimation on Measured Values (Age and Gender does not affect the measured values)	
Display Type	1280 × 800 10.1 inch Color TFT LCD	
Internal Interface	Touchscreen, Keypad	
External Interface	Serial(RS-232C): 2 EA, USB (HOST): 2 EA, LAN (10/100T): 1EA	
Wireless Connection	Bluetooth, Wi-Fi	
Compatible Printer	Laser/Inkjet PCL3 or above SPL	
Test Duration	About 30 seconds	
Weight Range	5~300kg (11.0 - 661.4 lb)	
Age Range	3 years and older	
Height Range	95~220cm (3ft 1.40in ~ 7ft 2.61in)	
Logo Display	Name, Address and Content Information can be shown on the Results Sheet	
Digital Results	LCD Screen, LookinBody Web, LookinBody120	
Types of Result Sheets	InBody Result Sheet, InBody Result Sheet for Children, Thermal Result Sheet	
Notification Sounds and Voice Guidance	On the progress of the test, saving settings, and inputting information such as personal details	
Data Storage	Saves up to 100, 000 measurements (When ID is entered)	
Test Mode	Professional Mode and Self Mode	
Dimensions	501.9 (W) × 892.4 (L) × 1124.4 (H) mm	
Equipment Weight	24.4 kg (53.8 lb)	
Applied Rating Current	200 μA (±20 μA)	
Adapter	Bridgepower (BPM040S12F07)	Power Input: AC 100-240V, 50-60Hz , 1.2A (1.2A-0.6A)
		Power Output: DC 12V, 3.4A
	Mean Well (GSM40A12)	Power Input: AC 100-240V, 50-60Hz, 1.0-0.5A
		Power Output: DC 12V, 3.34A
Operation Environment	10 - 40 °C (50 - 104 °F), 30 - 75 % RH(No Condensation), 70 - 106 kPa	
Storage Environment	－10 - 70°C (14 - 158°F), 10 - 80% RH(No Condensation), 50 - 106kPa
